For ITU Council

KINGDOM OF BAHRAIN

Candidacy for ITU Council Election 2022

**The Kingdom of Bahrain is
honoured to present its
candidature for the ITU
Council Election (Region E)
for the 2023-2026 term
having served as member
of the Union since 1974.**

Population Region

1.5 million

Country Size

785.08 km²

Our Commitment

As an island nation, Bahrain's presence on the ITU Council would bring something new to the community and diversify international representation with the track-record that the Kingdom has built in the ICT sector as well as our digital transformation which has received international recognition, establishing Bahrain as a regional pioneer in the process.

Rich in human capital and skilled talent, we are proud of our network and regulatory readiness, and excited to work with all ITU members to reduce digital gaps and move towards a global digital economy.

Bahrain has **solid common work policies with the UN** and several UN agencies across various economic sectors. This candidacy is a **further commitment to extend Bahrain's efforts to the telecommunications and ICT sector**, which has become a key enabler to economic growth and social development.

Through the ITU Council, we aim to contribute to developing the ever-changing global digital landscape and being part of achieving the UN's Sustainable Development Goals that also align with the Kingdom's strategic ICT priorities as part of Vision 2030.

A regional leader

Bahrain has ranked first in the Arab region in the ITU ICT Development Index (IDI) for several consecutive years and continues to be a regional ICT leader offering the most competitive and affordable ICT services, with operational savings of 30-40% compared to nearby countries.

Being the **first country in the GCC to deregulate its Telecommunication sector, adopt a Cloud-First Policy nation-wide and a plan to reach net-zero carbon emissions by 2060**, it has contributed to Amazon Web Services' decision to set up its hyperscale Cloud Region in Bahrain, also the first in MENA. Similarly, China's Tencent Cloud also deployed its First MENA Region Internet Data Centre Hub in Bahrain.

The Kingdom's recently announced post-COVID19 Economic Recovery Plan 2022-2026 will also further build on a digital transformation that has already begun. As part of the plan, **the Kingdom aims to offer 100% national broadband network coverage and automate more than 200 additional government services in addition to over 560 government e-services currently provided.**

Already, Bahrain is seeing progress made on this front from both the public and private sectors. **The government has undertaken an initiative to train at least 20,000 citizens on cybersecurity.** In addition, the national labour fund, Tamkeen, who has supported more than 100,000 individuals, is set to train 1,200 Bahrainis in coding and emerging technology while the launch of Citi's Global Technology Hub will create 1,000 coding jobs in Bahrain over the next 10 years –further enriching the local tech talent supply.

A Track Record in ICT

The Kingdom of Bahrain gained its independence 50 years ago, on the 16th of December 1971. But our ICT journey started almost 100 years before that, going as far back as 1864 when the nation was connected to the Indo-European sub-sea telegraph cable.

1st Telegraphic Office opens

1931

Introduction of telegraph and telephony services (by UK firm Cable and Wireless, an integral player in early development of local ICT sector)

1947

1949

Installation of Bahrain's 1st automatic telephone exchange

1969

Bahrain enters age of satellite communication as Middle East's first satellite station is opened by the late Amir HH Shaikh Isa bin Salman Al Khalifa at Ras Abu Jarjour

1975

Bahrain joins ITU as member after its independence in 1971

1980

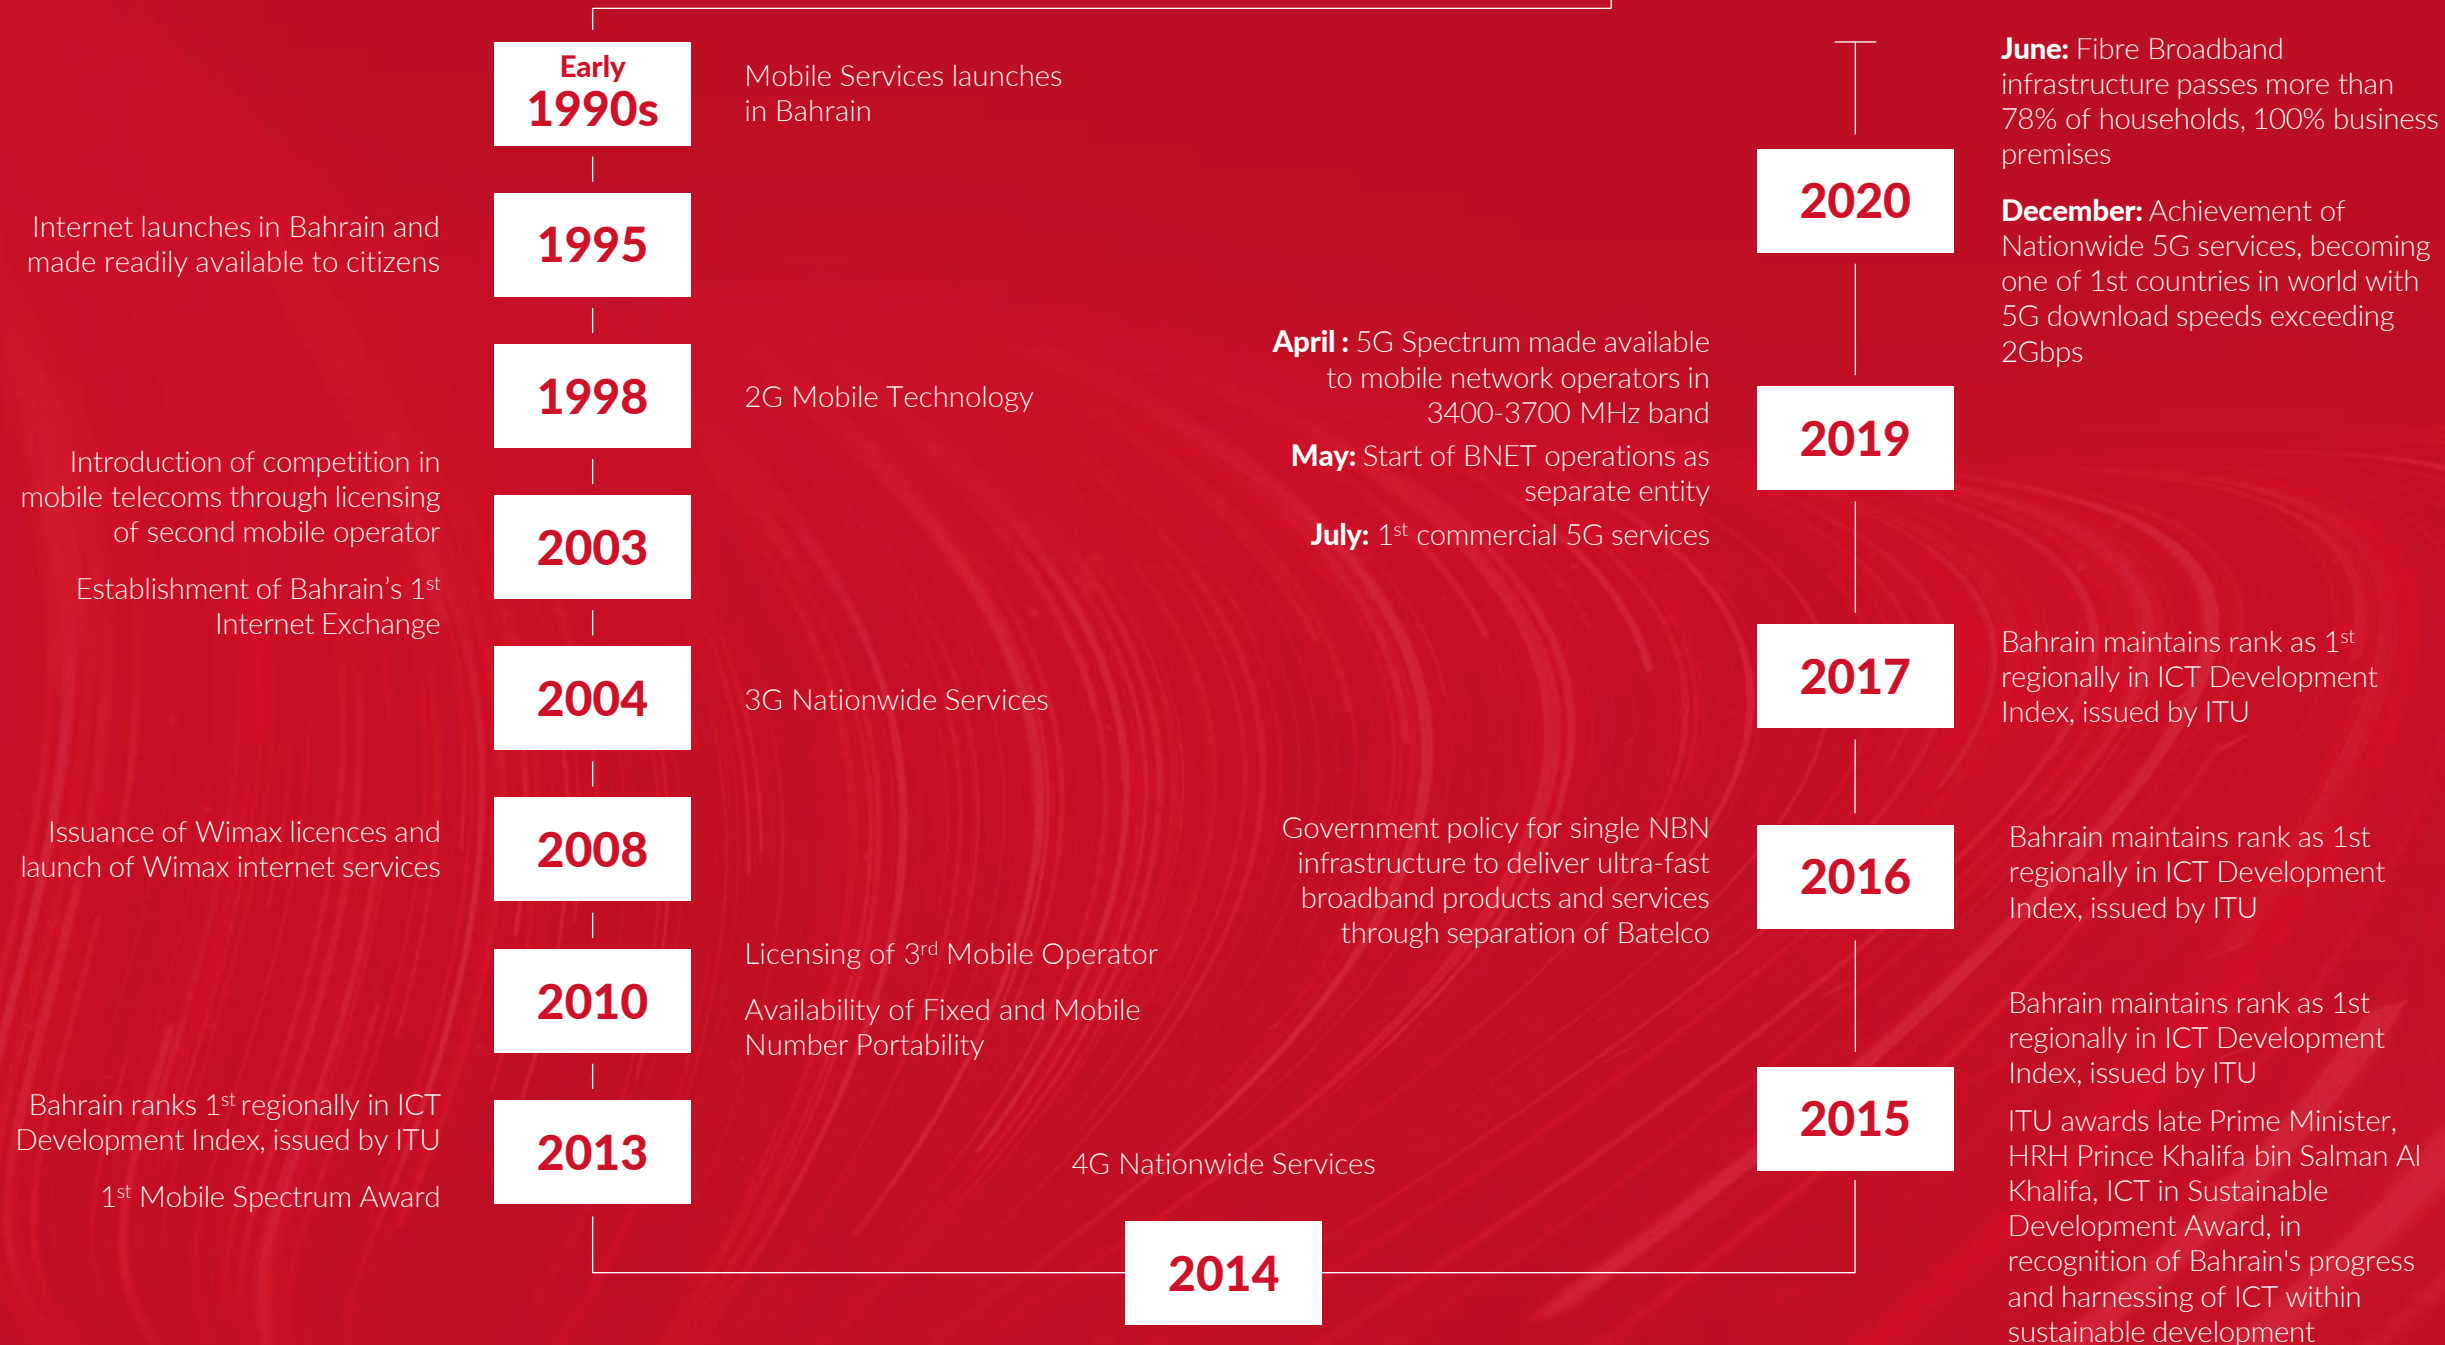

1st Digital Telephone Exchange

1981

Establishment of Bahrain Telecommunications Company (Batelco) by legislative decree (18) of 1981

1985

1st Fibre Optic Cable installation

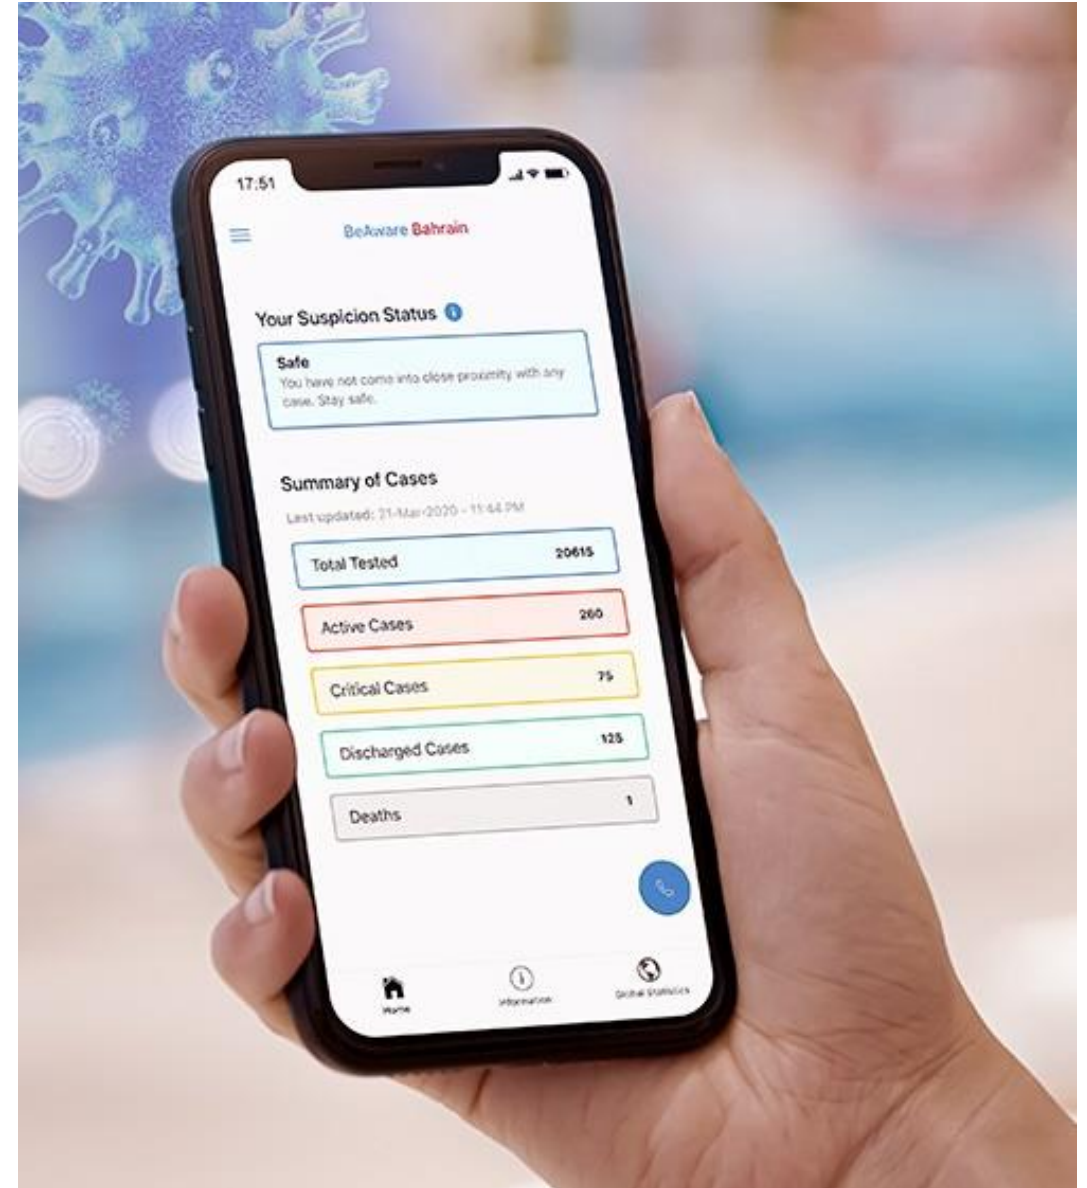

Globally recognized response to the pandemic

The Kingdom's strong digital connectivity stood Bahrain in good stead when the pandemic started coming into full force. Bahrain was able to quickly set up a dedicated [National Taskforce](#) and launch a tracing app "BeAware" to contain the spread of the virus and took measures to ensure that testing and quarantine facilities were set up without delay.

The Kingdom has one of the highest testing rates per capita in the world, garnering the recognition of the World Health Organization for its agile response. Bahrain was also the first Arab country to join the Solidarity Trial to find effective treatment for the virus.

To minimize disruption on society, Bahrain was able to support the transition of educational institutions to online learning – quicker than most countries in the world, thanks to the Ministry of Education's online cloud-powered education portal with 5.7 million users, 6600 lessons and 372 e-books as of April 2020.

Global supply chains have also been decimated by the ongoing COVID-19 pandemic. However, Bahrain's MVC Global in partnership with Cox Logistics Group introduced a first-of-its-kind "SmartHub" logistics warehouse for pharmaceuticals and food to be headquartered in Bahrain and serve the GCC market.
