

THE RUSSIAN FEDERATION

THE COUNTRY OF TECHNOLOGIES

Maksut Shadayev
Minister of Digital Development and Mass
Communications of the Russian Federation

“ Digital transformation is one of Russia’s national development goals until 2030. By then, 97% of families must have access to fast and affordable Internet while 95% of public services must be available online. High-speed mobile Internet will cover all residential areas, roads and railways. The key sectors of the Russian economy must follow the global best practices as they pursue digital transformation, while relying on homegrown solutions. Even today, we have our own solutions across all industries and we will continue to improve them. ”
